Paper Three Summary

Matthew Neal, Joseph Sankar, and Alexander Sobran

September 17, 2015

Reference

Bird et al [1] listed below.

Important Keywords

Global development Development that is globally distributed but takes place within one company. The authors contrast this to *outsourcing*, in which development takes place among multiple companies and *collocated development*, where development takes place in one location.

Coordination breakdown A difficulty usually encountered in distributed development where employees in one location are not appropriately aware or responsive to the work of employees in another location.

Binary distribution Different levels of classifications for where binaries are developed. The authors give *building, cafeteria, campus, locality, continent,* and *world* as different ways to classify binary distribution.

Organizational integration An organizational structure that spans geographical locations at low levels.
